# **New Award to Honor Moshe Markewitz**

At its most recent meeting, the Board of the SCC has determined to designate the award for 'First Place' in each of the competition groups, the "Moshe Markewitz Award." Moshe was among the founders of the Syosset Camera Club and served in many capacities including President for multiple terms. An avid photographer, Moshe was as eager to learn new techniques as he was to mentor new members and students. For his years of service and dedication to the Syosset Camera Club, It is appropriate that we posthumously honor Moshe with this named award.

# Don't Take it, Create it; Visualization

Barry Goldstein

## Program 2012-2013 Meetings start at 7:30PM

April

18<sup>th</sup> Horses of the Carmague by Lorraine Piskin 25<sup>th</sup> Critique and presentation

May

9<sup>th</sup> Competition - Judged by Mike DiRenzo 16<sup>th</sup> Lecture and DXO representative 23<sup>rd</sup> End of Year Competition- Joanna Gazzola, Rich Witkover, and Pat Walsh.

June

7<sup>th</sup> 6:30 PM, Awards Dinner at LaFamiglia

You can't create anything that is not first imagined. Much of contemporary photography is opportunistic. We tend to look at the environment and then capture parts of it with a camera. Most other art forms start with a concept that originates in the mind and then

**Original Capture** 

the artist proceeds to create an interpretation of it

What differentiates the work of Ansel Adams, Minor White and other great photographers is not just the subject matter. It is the successful translation of an image formed in the mind onto a two dimensional surface using the tools of photography. When one obtains that

ability, it is possible to open up a new vista of potential subjects to photograph. This is especially advantageous in our current environment where many picturesque landscapes have succumbed to development and once aesthetically pleasing, antiquated structures have turned the corner from Iconic quaint to rotting junk.

"The moment when you no longer take pictures, You make them."

From a recent Zeiss advertisement

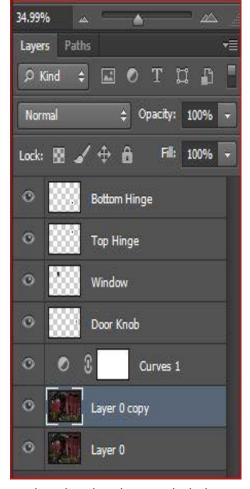

It's not too difficult to imagine what a scene might have looked like before someone messed it up with plywood, and that's the picture we want. Well, sparky, that's what Photoshop is for. Of course it is preferable to find a subject in the state that we would like, but time and opportunity is sometimes evasive.

Take as an example this architectural monstrosity. A window and the door of the barn in this picture have been boarded up and the weeds are consuming it. With a little effort the boarded-up window can be replaced with a copy of the remaining

window resized and skewed with the transform tools. A new door can be fashioned by copying a section of siding and pasting it over the plywood, while changing the perspective through transform/skew to appear to be partially open. Of course it's not a door without hinges and a handle, so those were copied from another photo, properly sized/angled and pasted into place. To give a suggestion of interior

space
behind the
door, the
triangular
area along
the top of
the door
was
painted
black. The
final task
was to
clean up

some of the weeds using the clone tool, darken the horizontal white piece of wood and sky..

Voila! Of course, each added element was created on its own layer.

The author makes no representation that the finished picture is worthy of anything other than use as an example. It was used here only to illustrate that a pre-visualized image can be produced by starting with less than ideal subject matter,

# The Gimp (General Image Manipulation Program) Barry Goldstein

'The Gimp' and 'Gimpshop' are variations of a shareware product. As such, they are distributed free of charge so others may enjoy its use and contribute to its ongoing development. The variant that has the most Photoshop-like look and feel is Gimpshop 2.8.

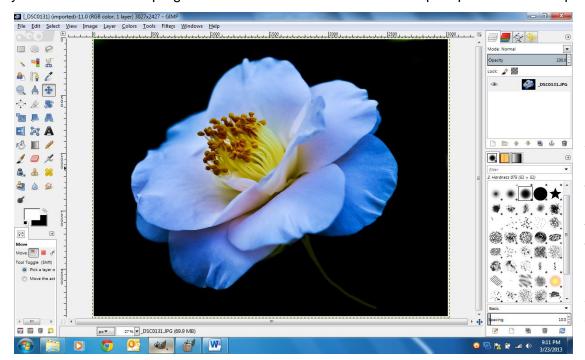

The beginnings of the program can be traced to a couple of students at Berkeley, who in 1998, decided they wanted to write an image manipulation program. This was 2 years prior to the release of Photoshop 1.0. Those interested in a more in-depth background should go to <a href="http://www.gimp.org/about/ancient\_history.html">http://www.gimp.org/about/ancient\_history.html</a>.

So how does Gimpshop compare to Photoshop? I have spent a little time with Gimpshop 2.8 and could not find much that Photoshop can do that Gimp could not while working in 8-bit JPG mode. Beyond that, you

would need Photoshop. The help menu in Gimpshop is comprehensive and context sensitive. If the item you are looking for does not show up initially, you can search the help file by using CTRL-F.

If you are experienced with Photoshop, you will find that Gimpshop has a learning curve. If on the other hand, you are new to either program it will be no harder to master Gimpshop than Photoshop and you will be ahead

by over \$600. One significant thing it does not do, is open RAW files. This is due to its lack of support for 12, 14 or 16 bit files. While I was able to open multiple images in the program, I could only display one at a time. I understand that a free plugin is available that will allow you to work with multiple windows within the program.

## Features Similar or identical to features in Adobe Photoshop include:

- Intelligent Scissors, similar to the Magnetic Lasso
- Rectangular, elliptical and lasso features
- Dropper, fill, gradient, pencil, paintbrush, eraser, airbrush, clone stamper, blur or sharpen, smudge, and dodge or burn features
- flip, rotate, scale, crop, zoom, move, foreground + background color swatch, layers, history, gradients, and drop shadow features

### Missing features include:

- Support for 16-bit, 32-bit, and floating point images.
- Support for the Pantone color matching system, or spot color.
- Support for color models other than RGB(A) and grayscale, such as CIE.
- Support for Adobe Photoshop 8BF plugins and other add-ons.
- Extensive gamma support.
- Extensive support for color management (GIMP has limited support through LCMS)
- Native support for Adjustment layers. (A plugin is available which adds some support for these.)
- Undo history "snapshots" that persist between sessions.
- The history brush tool
- Folders in layer window
- A free transform tool to rotate, scale and move in one tool
- A good interpolation code to draw smooth brush strokes using a tablet
